Education

National Institute of Technology, Goa	2024–2028
B.Tech in Electronics and Communication Engineering	CGPA: 7.88

Leadership & Experience

Social Media Manager, Ek Bharat Shreshta Bharat Club, NIT Goa	Jun 2025 – May 2026
--	---------------------

- Analyzed engagement metrics and iteratively optimized campaign execution through weekly A/B testing, increasing social media reach by 40% across Instagram, WhatsApp and LinkedIn.

Campus Ambassador, Techfest, IIT Bombay	Jul 2025 – Dec 2025
--	---------------------

- Managed outreach operations and tracked campaign performance for Techfest IIT Bombay, engaging 50+ participants through targeted campaigns across WhatsApp, email, and campus notice boards.

Projects

RAG Chatbot using Pinecone Vector Store

Developed a retrieval-augmented chatbot with document ingestion, vector search, and context-aware response generation using AI embeddings and LLM workflows.

Tech: Pinecone, OpenRouter, OpenAI Embeddings, n8n, AI Agents, RAG, Vector Database

- Built an automated document ingestion pipeline integrating Google Drive file triggers, text chunking, embedding generation, and Pinecone vector storage for semantic retrieval.
- Designed an AI agent workflow for context-aware conversational querying using retrieval-augmented generation architecture.

AI Workflow Automation using n8n

Built automated workflows using n8n integrating scheduled triggers, Gemini-powered prompt execution, and Gmail automation for communication workflows.

Tech: n8n, OpenRouter, Gemini, Gmail API, Workflow Automation

- Designed a scheduled automation workflow to generate AI-assisted email content and trigger automated email delivery using Gmail integration.
- Built modular trigger-based automation pipelines demonstrating workflow orchestration, prompt automation, and process optimization.

IoT Home Automation System using ESP8266

[GitHub](#)

Engineered a cost-effective IoT home automation prototype (~Rs.1,350) using ESP8266, integrating MQ-2 gas sensor, LDR, magnetic door sensor, and relay module to enable real-time smoke detection, intrusion alerts, and remote appliance control over Wi-Fi.

Tech: ESP8266, IoT, Embedded Systems, C++, Arduino IDE, Sensors, Relay Module

- Achieved full system functionality at under Rs.1,350 using cost-efficient component selection and custom circuit design on breadboard.
- Implemented 2.4GHz Wi-Fi communication via ESP8266 for real-time remote monitoring and appliance control from any location.

Certifications

- Gen AI Academy — Google Cloud & Hack2Skill (Hands-on LLM deployment & Generative AI workflows)
- Prompt Design in Vertex AI — Google Cloud (Advanced prompt engineering and model configuration)

Achievements

- Completed SQL 50 on LeetCode; solved 100+ problems from Striver's DSA Sheet across LeetCode and GFG, and participated in 15+ CodeChef contests.

Technical Skills

Programming: C, C++, Python, SQL, JavaScript

Embedded / IoT: ESP8266, Sensor Integration, Embedded Systems, Wi-Fi Communication, Relay Modules

Automation: n8n, Workflow Automation, AI Agents, RAG, Pinecone

AI/ML: Gemini API, OpenRouter, Google Vertex AI, Prompt Engineering, Hugging Face, OpenAI Embeddings

Tools: Microsoft Excel, Google Sheets, MySQL, Git, GitHub, VS Code, Google Cloud

Relevant Coursework

Data Structures and Algorithms, Operating Systems, Digital Logic Design, Database Management System, Object Oriented Programming, Sensor Technologies, Communication System
